

THE FACTS

BOTOX®

- Botox® treatments only take a few minutes depending on the number of injections needed
- The effects of treatment last for approximately 3 months.
- The use of Botox® is very safe, however, as with any medical procedure there are possible risks and side effects to be aware of when using Botox®.
- Patients will begin to see results from their Botox® treatment from 3-5 days following the procedure.

DERMAL FILLERS

- Dermal fillers approved by the FDA are minimally invasive and very safe. As with any procedure, there are possible risks, the most common being post procedure bruising and swelling which is usually very minimal and resolves quickly.
- Dermal filler treatments typically take anywhere from 20-40 minutes and the amount of dermal filler needed will depend on volume loss and the areas you would like to restore to its natural beauty.
- You will see results immediately after treatment.

ABOUT BOTOX®

Botox® is an FDA approved purified protein which is injected into targeted muscles and temporarily blocks nerve signals that cause muscle movements, essentially relaxing the muscle which reduces or eliminates fine lines and wrinkles.

Within 3-5 days of the Botox® injection, the treated facial muscles become temporarily relaxed, causing the overlying skin to lay flat and unwrinkled. The untreated facial muscles contract in a normal fashion allowing facial expressions to be unaffected.

Botox® injections only take a few minutes and will remain effective for 3-6 months.

ABOUT DERMAL FILLERS

As skin ages, it begins to lose collagen filled with hyaluronic acid (HA). Collagen and HA add structure and volume to the face, therefore a lack of HA causes the skin to sag and wrinkle. That's where dermal fillers come into play.

Dermal fillers are smooth injectable gels made from naturally occurring hyaluronic acid. Dermal fillers add volume to these deficient areas to restore your face to a more natural youthful appearance.

In just one short appointment, you will immediately see the esthetic results which last up to six months.

Millions of people use Botox®, Juvederm®, and Restylane® to achieve a more relaxed and smooth facial appearance, while still having the freedom of expression. Combined this with other esthetic treatments in our office, you will have a much more youthful appearance quickly.

An attractive smile can significantly improve your image and self-confidence and involves your entire face. Total facial esthetics will bring out your full beauty potential.

Now you can radiate beauty from the inside out by receiving Botox® and dermal filler treatments from our doctors who have been specially trained in total facial esthetics.

SAMPLE

Our professionals are highly trained in the entire anatomy of the head and neck as well as the oral cavity. We can administer your treatments with exceptional accuracy and precision.

Because Botox® and dermal fillers are temporary esthetic treatments, for your convenience, these treatments can be scheduled to coincide with other routine appointments in our office.
